SUMMARY

Software engineer with 8 years of paid experience building production web applications, mainly in Angular and TypeScript. I also build backend services in Go and PostgreSQL for my own product. Looking for a software engineer role, with visa sponsorship or remote.

SKILLS

Languages: TypeScript, JavaScript, Go, SQL, PHP, MQL5.

Frontend: Angular, RxJS, Signals, GraphQL, SSR, PWA, React, Next.js.

Backend and delivery: PostgreSQL, REST APIs, Docker, Caddy, Nginx, GitHub Actions, GitLab CI.

EMPLOYMENT

Tabin Tech | Frontend Engineer | 01/2022 – Present (part-time 03/2023 – 12/2024)

- Build Angular panels for Gamify (gmfy.ir), a gamification campaign platform, including the company panel with its campaign wizard and dashboard, using AI coding agents for much of the recent panel work.
- Build and maintain Angular client applications, including pastil.ir and nam.ir, now on Angular 22 with TypeScript, RxJS and GraphQL.
- Built shared Angular libraries (vft-core, vft-auth, vft-table, vft-ui-util) published to a private Nexus registry.
- Mentored engineers through code review.

Agatizer | Frontend Engineer, remote contract | 08/2021 – 10/2021

- Built a copy-trading dashboard that rendered live WebSocket data with D3.js, using virtual scrolling and RxJS streams.

Tushehbar Shipping Agency | Frontend Engineer, part-time | 11/2020 – 10/2021

- Built an Angular and DevExtreme dashboard that reduced manual data entry in logistics workflows.

Missha | Frontend Engineer, part-time | 10/2020 – 02/2021

- Built a localized Persian e-commerce PWA with offline support through Service Workers.

eSafar | Frontend Developer, then Frontend Engineer (part-time) | 05/2020 – 08/2020 and 10/2021 – 01/2022

- Built an Angular travel-booking frontend with i18n and PWA support.

Azki | Frontend Consultant, part-time | 09/2019 – 12/2019

- Updated Laravel Blade pages for an online insurance comparison platform.

Shenoto | Frontend Developer | 09/2018 – 05/2020

- Led the migration to Angular 7 and built a podcast player with wavesurfer.js.

SELECTED PROJECTS

Licensed MetaTrader 5 tool (own product) | Sole developer | 09/2026 – Present

- Built with AI coding agents. I set the requirements, reviewed and tested the work, and run it in production.
- Built a licence server in Go for activation, trials, seat limits and an audit log, on PostgreSQL. A row lock (SELECT ... FOR UPDATE) enforces seat limits; a concurrency test fails when the lock is removed.
- Built a shop in English, Persian and Arabic. My own real test purchase passed end to end; there are no paying customers yet.
- Built an admin panel with a PBKDF2 password and TOTP, reached only through an SSH tunnel.
- Wrote offline licence verification in pure MQL5 (Ed25519 and SHA-512). It passes the RFC 8032 test vectors.
- Run it with Docker Compose, Caddy and nightly backups, and recovered it after a hosting disk failure, checking a fresh dump by restoring it into a throwaway database.
- Tests: 136 Go test functions across the backend packages, plus a CI target with tests, a release build and guard scripts.

Trading research harness (demo account only) | Sole developer | 09/2026 – Present

- Built a walk-forward test harness in Go that hands each strategy only past candles and reports results after costs with t-statistics.
- Result: no strategy showed an edge. A pre-registered test on about 3,000 trades per symbol failed on both, and optimisation stopped there.

FREELANCE

WordPress sites for small business clients: faracake.com (custom PHP plugins for orders and inventory) and nushamoments.ir (product catalog), 2026.

OPEN SOURCE

angular-lazy-load-directive: npm package for image lazy loading with Angular signals. One merged docs fix in angular/angular (PR #62361).

EDUCATION

Bachelor of Information Technology. Islamic Azad University, 2015 – 2021

LANGUAGES

Persian (native). English (working proficiency; no formal test taken yet).
